

Ali Ahmad Raza

DevOps Engineer

☎: +91-8127095955 | ✉: iamaliraza5955@gmail.com | 📍 Delhi | 🔗 [linkedin.com/in/ali-ahmad-raza-devops](https://www.linkedin.com/in/ali-ahmad-raza-devops)

PROFESSIONAL SUMMARY

DevOps Engineer with **2+ years of hands-on DevOps experience** (4.8 years total IT experience) specializing in **CI/CD automation**, **AWS cloud infrastructure**, and **Infrastructure as Code**. Proven track record automating deployments across 50+ servers, containerizing applications with Docker, and cutting manual operations effort by approx. 30%. Hands-on Kubernetes practitioner through self-directed microservices projects; currently pursuing **CKA (Certified Kubernetes Administrator)** to deepen container orchestration expertise for Platform Engineering and SRE roles.

TOOLS & TECHNOLOGIES

DevOps & Orchestration: Kubernetes, Docker, GitHub Actions, Ansible, Terraform, Git

Cloud(AWS): EC2, IAM, VPC, S3, DynamoDB, Auto Scaling

Monitoring & Observability: Prometheus, Grafana

Security & DevSecOps: Trivy, Git Leak, SAST, DAST (hands-on via self-directed DevSecOps labs)

Linux Administration: RHEL, CentOS, Ubuntu — File/User Management, Networking, Disk Management, Patching

Scripting & IaC: Bash, YAML, Terraform, Ansible

Other: Incident Management, ITIL v4, Virtualization

PROFESSIONAL EXPERIENCE

HCL Tech – DevOps Engineer

Noida, INDIA | May 2022 – Present

DevOps implementation & Automation

- Designed and implemented CI/CD pipelines using **GitHub Actions** for automated build, test, security scan, and deployment workflows reducing release cycle time by 35%.
- Provisioned AWS infrastructure using Terraform including VPCs, Subnets, Security Groups, EC2 Instances, Route Tables, and Internet Gateways.
- Partnered with development teams on Infrastructure as Code (IaC) initiatives, accelerating deployment frequency by 2x across 3 product environments.
- Provisioned and configured 20+ **EC2** instances, VPC subnets, and security groups on AWS to host production Linux workloads.
- Automated Linux server configuration and application deployment using Ansible playbooks and dynamic inventories.
- Administered 50+ Linux servers (RHEL, CentOS, Ubuntu), ensuring 99.9% uptime and performance stability
- Authored Ansible playbooks to automate provisioning of 30+ servers, reducing configuration deployment time from hours to minutes.
- Containerized 5+ applications using Docker with multi-stage Dockerfiles and distroless images, cutting image size by 60% and eliminating environment drift.
- Deployed and managed Kubernetes workloads using Deployments, Services, Namespaces, ConfigMaps, Secrets, and Autoscaling concepts.
- Integrated DevSecOps tools including Bandit, Trivy, Gitleaks, and dependency scanning into CI/CD pipelines.
- Applied monthly security patches and kernel upgrades across the server fleet, achieving 100% compliance with security policies.
- Investigated system anomalies using performance tools (top, iostat, vmstat, tcpdump) to drive root cause analysis and reduce MTTR by 40%.
- Managed incidents, changes, and service requests through Jira and ServiceNow.

- Managed **Linux server administration** activities including user and group management, file permissions, access control, and system configuration.
 - Monitored system performance metrics including CPU, memory, disk utilization, and system health, ensuring optimal server performance and availability.
 - Performed troubleshooting and root cause analysis for Linux server incidents, **minimizing system downtime** and improving operational stability.
 - Executed Linux server patching, upgrades, and maintenance activities following change management procedures.
 - Managed virtual machine lifecycle operations within VMware vCenter environments including provisioning, configuration, and maintenance activities.
 - Performed storage management tasks including disk allocation, partitioning, and logical volume management (LVM) expansion.
 - Supported incident, service request, and change management activities through Jira and ServiceNow ticketing systems.
 - Automated routine administrative tasks using Shell scripting to reduce manual effort and improve operational efficiency.
-

KEY PROJECTS

1. **Project:** Cloaknote.online -Secure Note Sharing Platform | **Duration:** Jan 2026 – Mar 2026

Key Achievement:

- Developed and deployed a containerized **multi-tier** web app using Docker and Kubernetes.
- Provisioned and managed cloud infrastructure using Terraform (Infrastructure as Code) in self-contained lab environments modeled on production AWS DevOps workflows.
- Implemented CI/CD pipeline with **GitHub Actions** for automated build and deployment.
- Applied DevSecOps practices including **SAST** (Bandit), dependency scanning (safety), container vulnerability scanning (Trivy), and secrets detection (Gitleaks).
- Configured Kubernetes Deployments, Services and namespaces with **Scaling** and **Self-healing** capabilities.

CERTIFICATES

- GitHub Actions | Microsoft | June 2026
- GitHub Copilot | Microsoft | July 2026
- Certified Solution Architect | AWS | August 2026
- Certified Kubernetes Administrator (CKA) — In Progress, targeted 2026

EDUCATION

- **Bachelor of Technology – CSE** | Vision Institute of Technology | 2021
